(SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably cervical cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to human single exon nucleic acid probes
                                                                                                                                                                                                               Peptide #2092 encoded by probe for measuring cervical gene expression.
                                                                                                                                                                                                                                                    Probe; human; microarray; gene expression; cervical epithelial cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 18;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              DB 22;

                                                      mediated tissue damage such as occurs in the course of autoimmune diseases, e.g. rheumatoid arthritis. It can also be used for determining metastatic potential or to treat or prevent tumor cell metastasis. This peptide corresponds to AA 200-219 of the CD44
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New antiviral agent disrupting binding of VP22 to VP16 or gB -useful for treating infections caused by herpes simplex, e.g. cold
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is a herpes simplex virus (HSV) truncated tegument protein VP22 derived peptide. VP22 was used in the preparation of a novel antiviral agent, which inhibits the maturation and/or replication of HSV by disrupting association between VP22 and VP16 and/or gB. The agent can be used to treat, e.g. cold sores, genital herpes, chickenpox and shingles.
                                                                                                                                                                                                                                                                        ..

(see AA100010-AA110067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                     predicting, diagnosing, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic aetiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                              Novel single exon nucleic acid probe used to measuring gene expression
                                                                                                                                                                                                                                                                                                                                                    The present invention relates to novel single exon nucleic acid probes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Peptide #5652 encoded by probe for measuring cervical gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Probe; human; microarray; gene expression; cervical epithelial cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Length 18;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Op
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ij
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Probe; human; breast disease; breast cancer; development disorder; inflammatory disease; proliferative breast disease; non-carcinoma tumour.
                                  Peptide #2196 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Peptide #2077 encoded by probe for measuring breast gene expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human genome-derived single exon nucleic acid probes useful for analyzing gene expression in human placenta {\cdot}

The present invention relates to single exon nucleic acid probes (SENP: see AAI31315-AAI57546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
     analyzing gene expression in human placenta

                                                                                                                                                                                                                                                                                                                    0;
                                                                                                                                                The present invention relates to human single exon nucleic acid probes (SENF: see AA110068-AA128459). The present sequence is a peptide encoded by one such probe. The SENPs are defived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical useful in grading and/or staging of diseases of the cervix, notably everyical cervical cancer.
                                                                                                                                                                                                                                             Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Peptide #5912 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                                                                                                                                                                                                             q
```

```
protein. The protein encodes an enterokinase cleavage site and was inserted into the active site loop of thioredoxin between residues G34 and P35. The fusion protein containing this internal is enterchinase site was expressed at levels equivalent to native thioredoxin and was cleaved with an enterokinase treatment. The fusion protein was found to be as stable as native thioredoxin, being stable to a 10 minute incubation at 80C. It appears that the active-site loop of thioredoxin can tolerate a wide variety of peptide insertions resulting in soluble fusion proteins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This sequence was used to make a fusion protein with E. coli thioredoxin

                                                                                                                                                                                                                                                                                                                                                                                                                                                           Proteins and peptide(s) fused to thioredoxin or thioredoxin-like molecules – useful for prodn. of large amts. of heterologous proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Human; beta-amyloid precursor protein; beta-APP; diagnosis; cancer; frameshift mutation; age-related disease; neurodegenerative disorder; Alzheimer's disease; Down's syndrome; myotonic dystrophy; neuronal; Huntington's disease; multiple sclerosis; alcoholic liver disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Small peptides (AAR75770-81) of random composition and hydrophilic, hydrophobic or neutral character were inserted into the active site loop (G34-P35) of E. coll thioredoxin (AAR75769). The resulting flusion proteins were expressed in the soluble cellular fraction of E. coll G1724 hosts at levels comparable to native thioredoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human bcl2 proto-oncogene mutant protein fragment 18.

                                                   Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           random insertions of 14 amino acids were made at levels comparable to native thioredoxin. All of them were found in the soluble cellular fraction. The inserted sequences (ARM45921-R45932) include examples that were both hydrophobic and hydrophilic, and examples which contained Cys residues. It appears that the active site loop of thioredoxin can tolerate a wide variety of peptide insertions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Twelve randomly generated peptide insertions were made into the active site loop of E.coli thioredoxin, between residues Gly34 and Pro35. Each of the thioredoxin fusion proteins containing these
                                                                                                                                                                                                                                                                                                                              Randomly generated peptide 7 for insertion in E.coli thioredoxin.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              fusion proteins with a thioredoxin-like protein for high stability and solubility

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö
                                                                                                                                                                                                                                                                                             This invention describes a novel method for the diagnosis of a disease caused by, or associated with, an RNA molecule that has a frameshift mutation. The method is used to diagnose age-related diseases, especially cancer and a wide range of neurodegenerative disorders (e.g. Alzheimer's disease, Down's syndrome, myotonic dystrophy, Huntington's disease, multiple sclerosis; alcoholic liver disease, diabetes mellitus type II and many others listed) or susceptibility to these disorders. The method allows a definitive diagnosis of Alzheimer's disease in living partients, at an early stage. It is based on the observation that disease may be caused by mutations in RNA rather than DNA. The invention describes the used of neuronal system RNA molecules, specifically proteins including
                                                                                                                                                                                                                                                                                                                                                                                                                         used of neuronal system RNA molecules, specifically proteins including beta-amyloid precursor protein (beta-APP), the microtubule associated proteins Tau and Big Tau, ubiquitin B, apolipoprotein E, microtubule associated protein 2 (MAP2), neurofilament-L, neurofilament-E, presentlin I, presentlin II, glial fibrillary acidic protein (GRAP), the cellular tumour antigen p53, B-cell leukemia/lymphoma 2 (bcl-2) prote-oncogene, semaphorin III, HUPF-1, high mobility group protein-C (HMGP-C) and neuroendocrine specific protein A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                Diagnosing disease by detecting frameshift mutations in RNA or corresponding protein mutations - used to diagnose cancer and neurological diseases, particularly Alzheimer's disease, and also for treatment and prevention with specific ribozymes or wild-type
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Herpes simplex virus type 2; HSV-2 antibody; detection; HSV-1; multiply displayed peptide structure.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Length 18;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Score 34; DB 19; Length 18

The invention relates to a multiply displayed peptide structure of formula [(X1)p-A-(X2)q-Spln-Core. X1, X2 = 1-6 non-interfering amino acid residues; A = Glu Glu Phe Glu Gly Ala Gly Asp Gly Glu Pro Pro Glu acid residues; A = Glu Glu Phe Glu Gly Ala Gly Asp Gly Glu Pro Pro Glu least 4; and p, q = 0 or 1. The linkage between the core and the spacer may be chemical or physical. Peptides of this formula are used in the diagnosis of herpes simplex virus type 2 (HSV-2). The peptides can distinguish HSV-2 from HSV-1. A series of 67 peptides (AAW66624-W66690), mostly 18 amino acids long, that spanned amino acids 21-699 of the predicted open reading frame of HSV qG2 structures of the invention and were made as multiply displayed peptide structures of the invention and were made against sera from HSV-1, HSV-2 antibody-positive individuals and from individuals having no laboratory evidence of HSV inflection. From the results, peptide 55 (AAW66678) was considered a likely candidate for type specific serodiagnosis of HSV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Protein tyrosine phosphatase (PTP) PEST P369A mutant peptide sequence.

therapeutically, e.g to prevent or treat tissue rejection, ischaemia, aneurysm, chronic inflammation, autoimmune diseases, etc. This peptide is derived from the C3/C4/C5 family of proteins in a region proximal to
                                                                                                                                                                                                                                                                                                                                                                                                                                                         sequences. Indels are peptide sequences corresponding to insertion or deletion sequences in members of a family of proteins when their sequences are aligned and compared. The peptides often correspond to sites of interaction between proteins or proteins and their ligands. The invention relates to a method for identifying regions of contact
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (interface peptides) in protein protein binding complexes and for the preparation of modulators of this interaction. The peptides presented here are modulators of the complement system (including peptides that act as vaccines by inducing modulating antibodies) which are useful
                                                                                                                                                                                                                                                                                     Modulatory cpds. identified by screening peptide(s) derived from indels - esp. from regions involved in protein-protein interaction, useful as inhibitors or activators of the complement system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Cortactin; SH3 domain; binding peptide; Src homology region 3; tyrosine kinase; immune response; lymphokine; interleukin 1; NCk; Abl; PLCgamma; p53bp2; Crk; Yes; Grb2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   δ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     g
                                                                                                                                                                                                                                                                                                                                            mutent protein sequence. The tragment corresponds to amino acus
355-374, and has the wild type proline residue corresponding to position
369 replaced by an alanine residue. PrP-PEST is a soluble PTP that is
ubsquitously expressed throughout embryonic development and in murine
adult tissues. The N-terminal portion of the encodes for the
catalytic domain, while the C-terminal portion is composed of 5 proline
catalytic domains, and a binding site for the adaptor protein Shc. The pro 2
domain is required for paxillin binding, and the synthesis of mutant
PPP-PEST proteins (e.g represented by this sequence) have shown that
proline 362 is important for paxillin binding activity. The invention
crelates to a compound that is capable of interfering with the binding of
PTP-PEST to signalling molecules that are involved in cell migration,
adhesion or division. The compound can be derived from minimal sequences
found in binding sites of PTP-PEST. The invention also relates to a
method for finding a genuine substrate for an enzyme in a cell that
compounds have expostatic and antiinflammatory activity. The compounds
are used for making medicaments for treating a disease related with cell
concern.
Concerned to the compound antiinflammatory activity. The compounds
career used for making medicaments for treating a disease related with cell
concerned.
Concerned to the compound and anglogenesis, especially
concerned.
Concerned to the movel method is used for identifying a genuine substrate for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ij
                                                                                                                                                                                                                                                                                                           This is a fragment of the protein tyrosine phosphatase (PTP) PEST, P369A mutant protein sequence. The fragment corresponds to amino acids
                                                                                                                                                            Novel therapeutic agents for treating diseases which are related to cell proliferation, migration, inflammation and angiogenesis especially cancer

Src homology region 3 binding peptide - used to activate Src tyrosine kinase(s) and to stimulate immune response by increasing production of certain lymphokine(s), e.g. interleukin-1

Claim 16; Page 99; 131pp; English

The present sequence represents a Src homology region 3 (SH3) binding peptide. SH3 binding peptides are selected from: (a) peptides which bind the SH3 domain of Cortactin; (b) peptides which bind the MH3 domain of Abl; (d) peptides which bind the SH3 domain of Abl; (d) peptides which bind the SH3 domain of Abl; (d) peptides which bind the SH3 domain of Crk; (e) peptides which bind the SH3 domain of Crk; (f) peptides which bind the SH3 domain of Crk; (h) peptides which bind the MH3 domain of Yes; and (i) peptides which bind the maino-terminal SH3 domain of Yes; and (i) peptides which bind the method to identify inhibitors of their binding to their respective SH3 domains, which could be used to modulate the pharmacological activity of proteins or polypeptide containing the SH3 domain. The peptides can also be used to activate ST or STC-related protein tyrosine kinases, to stimulate the immune cresponse by increasing the production of certain lymphokines, e.g. conjugated molecule to certain cellular compartments containing STC or

J. Cell Biol. 107:667-697(1988).

-!- FUNCTION: CALSEQUESTRIN IS A HIGH-CAPACITY, MODERATE AFFINITY,
CALCIUM-BINDING PROTEIN AND THUS ACTS AS AN INTERNAL CALCIUM STORE
IN MUSCLE. THE RELEASE OF CALCIUM BOUND TO CALSEQUESTRIN THROUGH
A CALCIUM RELEASE CHANNEL TRIGGERS MUSCLE CONTRACTION. BINDS 40
TO 50 MOLES OF CALCIUM. ALSO BINDS LAMININ.
-!- SUBCELLULAR LOCATION: THIS ISOFORM OF CALSEQUESTRIN OCCURS IN THE
SARCOPLASMIC RETICULUM'S TERMINAL CISTERNAE LUMINAL SPACES OF
FAST SKELETAL MUSCLE CELLS. ASPARTACTIN IS FOUND IN THE BASAL
LAMINA SURROUNDING INDIVIDUAL MUSCLE
                                                                                             liver.";
Eur. J. Biochem. 248:99-103(1997).

Fur. J. Biochem. 248:99-103(1997).

-!- FUNCTION: THIS IS THE HEME A-CONTAINING CHAIN OF CYTOCHROME CONTOASE, THE TERMINAL OXIDASE IN MITOCHONDRIAL ELECTRON TRANSPORT.

-!- CAPALYTIC ACTIVITY: 4 FERROCYTOCHROME C + O(2) = 2 H(2)0 + 4 FERRICYTOCHROME C.

4 FERRICYTOCHROME C.

A FERRICYTOCHROME C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                 01-FEB-1991 (Rel. 17, Created)

It can be used as part of immunochemical methods for the detection of HCMV antibodies. It can also be used, with at least one immunoreactive peptide from a pathogen other than HCMV, in an immunological combination process for the determination of different antibody specificities of different pathogens. The other pathogen is pref. HSV-1 or -2, EBV, VZV, HHVE, HAV, HCV, and/or HIV-1 or -2. Use of the peptide avoids the false signals of prior art prods. resulting from cross-contamination during the purification of HCMV antigen from cell cultures.
                                                                                                                                                                                                                 Gaps
                          The peptide can be used for treating inflammation and immune-mediated tissue damage such as occurs in the course of autoimmune diseases, e.g. rheumatoid arthritis. It can also be used for determining metastatic potential or to treat or prevent tumor cell metastasis. This peptide corresponds to AA 200-219 of the CD44
                                                                                                                                                                                                                ;

In which the free amino group of the N-terminal amino acid and/or the free carboxyl group of the C-terminal amino acid are blocked or otherwise modified. The agonist can be used, e.g. to improve sperm production in agricultural domestic animals such as horses and bulls.

The antagonist can be used, e.g. as an alternative "steroid-free" pill to block ovulation or as an immunogen for active or passive immunisation against gonadotropins. See AAR21754-R21765 and AAR23788-9.

                                                                       28-OCT-1997
                                                     AAW24962;
                          AAW24962
                                             Follicle stimulating hormone; FSH; thyroid stimulating hormone; TSH; contraceptive; in vitro fertilisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention also covers substitution, deletion and insertion variants having FSH antagonistic activity, as well as derivs. in which the free amino group of the N-terminal amino acid and/or the free carboxyl group of the C-terminal amino acid are blocked or otherwise modified. The antagonist can be used, e.g. as an alternative "steroid-free" pill to block ovulation or as an immunogen for active or passive immunisation against gonadotropins. See AAR21754-R21765 and AAR23788-9.
                                                                                                                                                                                                                                                                               12..15

Indels are peptide sequences corresponding to insertion or deletion sequences in members of a family of proteins when their sequences are aligned and compared. The peptides often correspond to sites of interaction between proteins or proteins and their ligands. The invention relates to a method for identifying regions of contact (interface peptides) in protein-protein binding complexes and for the preparation of modulators of this interaction. The peptides presented here are modulators of this interaction. The peptides that act as vaccines by inducing modulating antibodies) which are useful therapeutically, e.g to prevent or treat tissue rejection, ischaemia, aneurysm, chronic inflammation, autoimmune diseases, etc. This peptide is derived from the C3/C4/C5 family of proteins in a region proximal to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Modulatory cpds. identified by screening peptide(s) derived from indels - esp. from regions involved in protein-protein interaction, useful as inhibitors or activators of the complement system

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            It has an amino acid sequence which corresp. to a naturally occurring amino acid sequence for an epitope of HIV, and which further has two Cys residues on each side of the epitope. It is stabilised by a sulphur bridge between the 2 Cys residues formed by a chemical oxidation step. Also claimed are peptides having a shorter sequence. It provides an assay for the detn. of antibodies induced by HIV for use in diagnostic immunoassay kits. It may also be used as an immunising

AAR89215-R89251 represent clones of the Vbeta8 complementarity
determining region 3 (CDR3) of the T cell receptor beta (TCRbeta) chain.
These sequences were isolated from cerebrospinal fluid (CSF), spinal cord
(SC) and lymph nodes (LN) of clones of Lewis rats with experimental
autoimmune encephalomyelitis (BAB). By detecting the presence of a
marker TCR V gene bias in a body fluid which encapsulates all or part of
the target organ, an autoimmune disease (such as a neurological disease)
in a human can be identified. This method can also be carried out to
the vbeta gene bias, an immune-related disease that targets the central
correvous system can be diagnosed. Therapettic Vbeta peptide sequences can
the vbeta gene bias, an immune-related disease that targets the central
nervous system can be diagnosed. Therapeutic Vbeta peptide sequences can
the target tissue or organ of the disease, and selection
is carried out by identifying a vbeta gene bias in a body fluid that is
too the target tissue or organ of the disease, and selecting an
immunogenic peptide corresponding to the Vbeta gene bias. Multiple
sclerosis (MS) can be treated by identifying the CDR2 of a V gene peptide
con the surface of a Tymphocyte in the CSF of a patient and
also be used for the diagnosis and immune related therapy of optical

                                              AAW34409-W34412 represent the interleukin-5 (IL-5) receptor binding peptides of the invention. These sequences are based on the consensus sequences shown in AAW34403-W34408. The peptides can be used for the treatment of an inflammatory disorders of the respiratory tract, specifically asthma. They can also be used for the treatment of inmunomediated inflammatory skin conditions such as urticardi and angioedema, eczematous dermatitis, and hyperprolliferative skin disease such as psoriasis. Also for Theumatoid arthritis, inflammatory bowel disease spondylitis, osteoarthritis, gouty arthritis, inflammatory bowel disease chemical stability, enhanced pharmacological properties (e.g. half-life, absorption, potency and efficacy), altered specificity (e.g. a broad spectrum of biological activities) and reduced antigenicity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Interleukin-5; IL-5; binding peptide; core sequence; consensus sequence; lymphokine; T cell; mast cell; B cell; eosinophil; IL5 receptor; asthma; inflammatory disorder; rheumatoid arthritis; rheumatoid spondylitis; costeoarthritis; gouty arthritis; inflammatory bowel disease; angloedema; skin disease; urticaria; eczematous dermatitis; psoriasis; therapy.

sequences a molecular weight below 5 kD, and an IC50 of 100 microM or less for binding to IL5 receptors. The peptide may have one or more peptide CONH linkages replaced, an altered N-terminal group, and a c-terminal group of formula COR2, where R2 = 0H, lower alkoxy or NR3R4, where R3 and R4 = H or lower alkyl, or the nitrogen atom of the -NR3R4 group can optionally be the amine group of the N-terminus of the peptide so as to form a cyclic peptide. The method may be used for treating an IL-5-mediated disorder that involves the accumulation of eosinophils. It is especially for treating an IL-5-mediated inflammarcry disorder of the respiratory tract, especially asthma, by administering an inhalant composition comprising a peptide or peptide analogue as above in an aerosolised carrier solution or dry powder. Other diseases that may be treated with the method include rheumatoid arthritis, rheumatoid spondylitis, osteoarthritis, gouty arthritis, inflammatory bowel disease, and various skin conditions (including urticaria, angloedema, eczematous
                                                                                                                                                                                                                                                                                                                                                                         ;

The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                          printed
                                                       Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                  Peptide #2196 encoded by probe for measuring placental gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Gaps
                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ;

The present invention relates to novel single exon nucleic acid probes see AAI00010-AAI10067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for preddicting, diagnosing, grading, staging, monitoring and prognosing adiseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and non-carcinoma tumours.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp. WIPO.Int/pub/published_pct_sequences.
                                                                                                                                                                                                                                        Probe; human; breast disease; breast cancer; development disorder; inflammatory disease; proliferative breast disease; non-carcinoma tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel single exon nucleic acid probe used to measuring gene expression
                                                                                                                                                                                                            Peptide #2077 encoded by probe for measuring breast gene expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 27; SEQ ID No 12135; 322pp; English

Patent No. 5686247

GENERAL INFORMATION:
APPLICANT: HOLLAND, JAMES
APPLICANT: HOLLAND, JAMES
TITLE OF INVENTION: DETECTION OF MAMMARY TUMOR VIRUS ENV GENE;
TITLE OF INVENTION: LIKE SEQUENCES IN HUMAN BREAST CANCER
NUMBER OF SEQUENCES: 18
CORRESPONDENCE ADDRESS:
ADDRESSEE: Brumbaugh, Graves, Donohue & Raymond
STREET: 30 Rockefeller Plaza
CITY: New York
STATE: NY
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Length 20;
